

# Cast Iron Frame Motors For Zone 21 Top Premium Efficiency Exceeds EFF1

## Standard Features:

- Three-phase, multivoltage, IP66, TEFC
- Output: 4 up to 315kW
- Frames: 112 up to 315M/L
- Voltage: 220-240/380-415V (up to 100L)  
380-415/660V (from 112M and up)
- Class "F" insulation ( $\Delta T=80K$ )
- Continuous duty: S1
- Design N
- Ambient temperature: 40°C, at 1000 m.a.s.l.
- Squirrel cage rotor/Aluminium die cast
- Oil Seal (frames 63 up to 80)
- W3Seal (frames 90S up to 355M/L)
- Anti-condensation drain holes
- Temperature Classification: Zone 21-maximum guaranteed external surface temperature T125°C temperature limitation because of the presence of dust clouds (for material with ignition temperature above 125°C) and presence of dust layers (up to 5mm)
- Regreasing nipples from frame 225S/M and above
- Metric thread cable entries in terminal box
- Thermistors (1 per phase) 140°C
- Suitable for Inverter Duty applications
- Color: RAL 6021

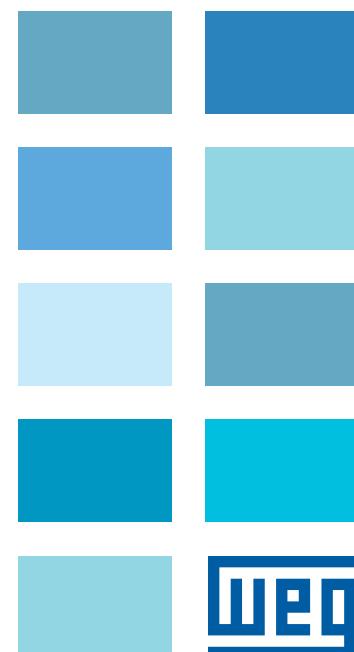

## Options Available:

- Degree of Protection: IP65
  - Bearing seals:
    - Oil seal (frames 90S up to 355M/L)
  - Thermal protection:
    - Thermostats
    - RTD-PT 100
  - Space heaters
  - Design H
  - Class "H" insulation
  - Roller bearings for frame 160M and above
- More options available, on request*

## Typical Applications:

These motors are designed to operate in areas that can release flammable dust or in atmospheres where explosions can occur due to a mixture of air and dust:

- Sugar refining plants
- Breweries
- Cement plants
- Textiles, pharmaceutical, chemical and agricultural process industries
- Other several duty applications

## Features and Benefits

### Terminal Box

Made of cast iron made with plenty of internal space. The terminal box can be rotated in 90° intervals, having one or two threaded holes to connect the power supply cables. Power supply connection components are certified, then reducing short-circuit inside the terminal box. Designed in such a way that the energized components remain at a minimum safe distance from grounded components parts. In order to allow end users safety, the motors are designed with grounding lug inside and outside of the terminal box, with the inside grounding lugs duly connected from the factory.\* Available as top or side mounted.

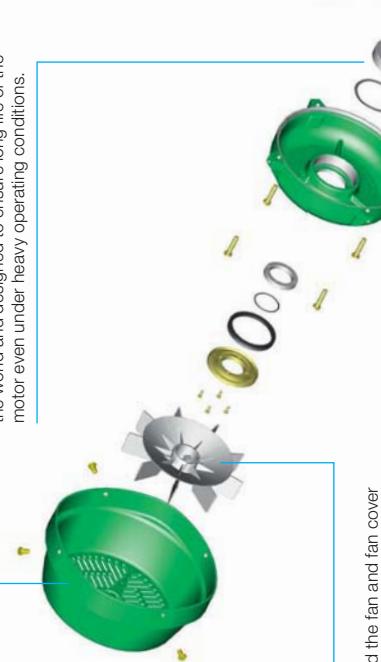

### Fan Cover

Made of steel plate for frames 112 up to 132M and of cast iron for frames 160M and above. It offers a superior mechanical rigidity, corrosion-resistance and extended lifetime.

### Bearings

WEG motors are fitted with the highest quality bearings selected from the best manufacturers in the world and designed to ensure long life of the motor even under heavy operating conditions.

**Fan** WEG has designed the fan and fan cover having in mind the lowest noise level. The efficient cooling ensures low motor temperature rise. This minimizes winding losses, thus increasing motor efficiency. The W21 line is supplied with anti-static polypropylene fans from 112 up to 315SM frames. Alternatively, cast iron or aluminum fans can be supplied on request for all frames.

### Rotor

High-pressure die casting aluminum rotor dynamically balanced reducing vibration. Advantages of aluminum rotors include lower inertia, higher starting torque and higher mechanical stiffness, among others. The steel laminations are thermally and chemically treated to improve efficiency and minimize mechanical stress.

### Shaft

WEG uses SAE/AISI 1040/45 steel as standard, which provides high mechanical strength, preventing bending under load and minimizes fatigue which extends lifetime. Specifically designed to withstand torques caused during motor acceleration and deceleration. Its size is larger than the standard motor and, upon special design, motor can have second shaft end.

### Stator

The stator is built with highest quality of steel lamination and it is thermally and chemically treated to reduce electrical losses and operating temperature. Guarantees high efficiency and extended motor lifetime.

### Frame

WEG motors are made of FC-200 high-grade cast iron. The frames are provided with fins aiming at improving the heat dissipation and adequately spaced to minimize air blockage due to build up of dirt. Motor designed to ensure that surface temperature is lower than ignition temperature of the gas that is present in the environment. Mechanical components are designed to withstand an explosion inside the motor without causing any risk to outside areas since there is no flame front propagation through frame path. The motors can be mounted in any position, horizontal and vertical, withstanding the maximum axial and radial thrusts.

### Seals

WEG Explosion Proof Motors are fitted with either Lip seal or Labyrinth Tachonite as standard (see standard features list) to provide the best possible protection.

### W3Seal

Exclusive WEG sealing system (tachonite + virgin + o-ring) guarantee maximum protection against the ingress of solid and liquid contaminating

**Endshields** Made of cast iron, they are provided with external fins for better temperature dissipation, thus increasing bearing life.

- All the dimensions are given in millimeters
- Certified threaded plugs for EEx e motor line
- The values shown are subject to change without prior notice
- \* Shaft dimensions for II pole motors, only for direct coupling
- \*\* For frame 100L, 3 kW, 4 poles, Premium Efficiency motors, the L dimension is 420mm and LC dimension is 475mm.

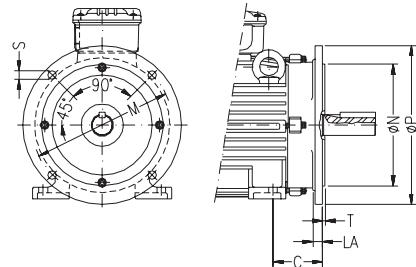

\* This data apply to EEx d - Cast Iron Motors for Zone 21 – Improved Efficiency - EFF2, Premium Efficiency – EFF1, Top Premium Efficiency – Exceeds EFF1
