Hydraulic test pumps

- Model CPP1000-M and CPP1000-L
- Model CPP1000-X and CPP1600-X

Applications

- Simple pressure generation for laboratories, workshops or on site
- For testing, adjusting and calibrating all types of pressure measuring instruments
- Hydraulic pressure generation up to 7,000 bar

Special Features

- Ergonomic handling via a smooth-running precision spindle within the pump body
- Integrated oil reservoir
- Removable star handle
- Freely rotating test connections (meaning the instruments can be orientated as required)
- Proven technology from the CPB5000

Description

Areas of application
Test pumps are used to generate pressure for testing, adjusting and calibrating mechanical and electronic pressure measuring instruments by means of comparison measurements. These pressure tests can be carried out in laboratories, workshops or on site at the measuring point.

Ease of use
If the device under test and a sufficiently-accurate reference measuring instrument are connected to the test pump, when it is actuated, the same pressure will act on both measuring instruments. The device under test can then be calibrated or adjusted by comparing the two measured values at any pressure value.
CPP-X series offers excellent ease-of-use
The test pumps are equipped with a precision spindle, making it possible to approach measuring points precisely. In particular, the smooth-running hand spindle enables this even at very high pressures. In addition, the CPP series pumps feature a threaded spindle which only runs within the pump body. Thus there is no adverse bending moment acting on the spindle when it is fully open, and, particularly for field use, this also has the advantage that the dimensions of these pumps will not change as the spindle is turned during operation.
With the CPP-X models large test volumes can be easily filled and pre-compressed using the integrated initial pressure pump.
The CPP-X models are extremely robust due to their rugged design and, with the proven technology from the CPB5000 pressure balance, they offer exceptional ease-of-use.

Model CPP1000-M and CPP1000-L hydraulic hand spindle pumps, up to 1,000 bar
With their compact dimensions and low weight, the CPP1000-M and CPP1000-L hand spindle pumps are the most basic models in the CPP hydraulic test pump range. They have been designed primarily for examining and calibrating gauges with small volumes. Test specimens and reference equipment with larger volumes should be pre-filled either off-line from the test pump or simply and directly from the hand spindle pump, with the help of the test connection shut-off valves (available as accessories).
The CPP1000-L is the portable version with narrow back flange, sealed reservoir and integrated fine adjustment valve as standard. For the CPP1000-M, the fine adjustment valve, available as an option, can be integrated. When the fine adjustment valve is used, only one shut-off valve can be fitted for a test connection.
The test connections have a G ½" female thread. To calibrate instruments with different connection threads, appropriate threaded adapters are available (see Accessories).

CPP1000-L  CPP1000-M

1. Star handle with spring-loaded thrust pad
2. Cylinder with spindle and piston
3. Shut-off valve for reservoir
4. Test connections G ½" female thread, rotating, with O-ring
5. Fine adjustment valve
6. Rear flange
7. Front flange with 2 fixing holes Ø 6.4 mm
8. Medium reservoir
Model CPP1000-X and CPP1600-X hydraulic comparison test pumps, up to 1,000 bar and 1,600 bar respectively

The CPP1000-X and CPP1600-X comparison test pumps have been designed around a solid platform and, with the proven technology from the CPB5000 pressure balance, offer exceptional ease-of-use. With the integrated initial pressure pump and the 250 ml tank, large test volumes can also be easily filled and pre-compressed.

The two test connections on both pump models are equipped with quick-connectors with a knurled nut and interchangeable threaded adapters (G ½" female threads are standard). To calibrate instruments with different connection threads, appropriate threaded adapters are available (see Accessories).

Dimensions in mm

(1) Spindle pump with star handle
(2) Initial pressure pump
(3a) Shut-off valve 1,000 bar
(3b) High-pressure shut-off valve 1,600 bar
(4) Pressure gauge for test pressure
(5) Test connections (quick-connector with G ½" female thread, changeable, rotating, with O-ring)
(6) Screwed drain plug for reservoir
(7) Rotating base
Model CPP3000-X, CPP5000-X and CPP7000-X hydraulic comparison test pumps, up to 3,000 bar, 5,000 bar and 7,000 bar respectively

The CPP3000-X, CPP5000-X and CPP7000-X comparison test pumps have been designed around a solid platform and, with the proven technology from the CPB5000-HP high-pressure balance, offer exceptional ease-of-use. With the integrated initial pressure pump and the 250 ml tank, large test volumes can also be easily filled and pre-compressed.

The two test connections on all 3 pump models are equipped with a knurled nut and interchangeable threaded adapters with sealing cones (M16 x 1.5 male threads are standard). To calibrate instruments with different connection threads, appropriate threaded adapters are available (see Accessories).

Recommended reference instruments:

- **Precision digital pressure gauge Model CPG1000**
  - Measuring range: up to 700 bar
  - Accuracy: 0.05 % of span
  - Specifications see data sheet CT 10.01

- **Hand-held pressure indicator Model CPH6200**
  - Measuring range: up to 1,000 bar
  - Accuracy: 0.2 % of span
  - Specifications see data sheet CT 11.01

- **ProcessCalibrator Model CPH6000**
  - Measuring range: up to 8,000 bar
  - Accuracy: 0.025 % of span (<1,000 bar)
  - 0.1 % of span (>1,000 bar)
  - Specifications see data sheet CT 15.01

- **Hand-held pressure indicator Model CPH6400**
  - Measuring range: up to 8,000 bar
  - Accuracy: 0.025 % of span (<1,000 bar)
  - 0.1 % of span (>1,000 bar)
  - Specifications see data sheet CT 14.01

Calibration software

- **Calibration software EasyCal**
  - for inspection equipment monitoring incl. generation of calibration reports and archiving of calibration data
  - Specifications see data sheet CT 95.01
Complete test and service cases with pressure generation

Calibration case with Model CPH6200, CPH6000 or CPH6400 hand-held pressure indicator and Model CPP1000-L hand spindle pump consisting of:

- Transport case with digital instrument
- Hydraulic hand spindle pump Model CPP1000-L, up to 1,000 bar,
- Various seals
- Sensor cable
- Rechargeable battery and charger
- Space for different CPT reference pressure sensors

Further specifications see data sheet CT 11.01, CT 14.01 or CT 15.01.

Calibration case with Model CPG1000 precision digital pressure gauge and Model CPP700-H hydraulic hand test pump for pressures from 0 up to 700 bar consisting of:

- Plastic service case with foamed insert
- Precision digital pressure gauge Model CPG1000
- Hydraulic hand test Pump Model CPP700-H, 0 ... 700 bar

Further specifications see data sheet CT 91.07 or CT 10.01.

Calibration case with Model CPH6200, CPH6000 or CPH6400 hand-held pressure indicator and Model CPP30 hand test pump for pressures from -0.95 up to +35 bar consisting of:

- Transport case with foamed insert
- Hand-held pressure indicator
- Pneumatic hand test pump Model CPP30, -0.95 ... +35 bar
- Various seals
- Sensor cable
- Rechargeable battery and charger
- Space for different CPT reference pressure sensors

Further specifications see data sheet CT 91.06, CT 11.01, CT 14.01 or CT 15.01.
