Medium Voltage Variable Frequency Drive

WEG

MVW-01

WEG is a supplier of speed variation systems for Medium Voltage that can offer a complete package: Input Switchgear, Dry-type or Oil-type Phase-shifting Transformer, Variable Frequency Drive (VFD) and Medium Voltage Motor.

WEG Medium Voltage Variable Frequency Drives are designed with state of the art technology and use a multilevel structure with high voltage IGBTs (6,5kV) reducing the motor harmonic currents to extremely low levels.

The input rectifier configuration with 12-pulse or 18-pulse results in high power factor fully meeting IEEE-519 requirements.

The MVW-01 is designed with multiprocessing control architecture and uses a 32-bit high performance processor (64-bits bus) with floating-point capability, ensuring a high performance control of the drive and motor.

The MVW-01 follows the same programming philosophy of the LV WEG drive, resulting in a simple speed variation solution for MV applications.

The MVW-01 drives introduce remarkable innovation on the segment of medium voltage speed variation, combining robustness, simplicity, reliability and safety in a compact solution with the latest generation technology.

Main characteristics

- Totally digital with high performance 32-bits processor (64-bits bus)
- Smart keypad with dual display (LCD and LED)
- Motor voltages: 2.3, 3.3 or 4.16kV
- Power ratings up to 4500HP
- IP41/NEMA 1 Enclosure
- Air-cooled
- 12-pulse Input Rectifier (18-pulse as an option): high power factor (> 0.95)
- Multilevel topology (NPC - Neutral Point Clamp - 3/5 levels)
- Fiber optic insulation between the control section and the high voltage power section
- Voltage Source Inverter (VSI)
- Latest generation technology of High Voltage IGBT's (6,5kV) results in a reduced number of components, hence improving the system efficiency / reliability
- Ultra-reliable dry-type plastic film power capacitors
- Withdrawable power arms (easy and fast maintenance)
- High efficiency ($> 98.5\%$)
- Low noise level ($< 75\text{dB}$)
- Low drive losses (low heat generation)

Applications

Chemical, Petrochemical, Oil and Gas Industries

- Pumps
- Fans / Exhausters
- Compressors
- Mixers/Agitators

Cement and Mining

- Pumps
- Fans / Exhausters
- Conveyors
- Cement Kilns

Steel and Metallurgy

- Pumps
- Fans / Exhausters
- Steel Mill
- Winders / Unwinders

Sugar and Alcohol

- Sugar Mill
- Fans
- Exhausters

Pulp and Paper

- Pumps
- Fans
- Exhausters

Plastic and Rubber

- Banburys
- Extruders

Waste Water

- Pumps

Pumps

The variable frequency drive can vary the pump flow by adjusting the motor speed. In such a way, not only the improvement on the process control is obtained (better precision, higher production) but also energy saving. The use of a variable frequency drive also introduces another advantage: smooth starting - electrical (reducing the starting impact to the network) and mechanical (reducing the impact for the load and for the coupling) - resulting in reduced maintenance.

Mills

The variable frequency drive can be used with high starting torque loads to control and limit the motor current. Energy saving is obtained with constant torque loads, since the absorbed power is directly proportional to the speed ($P \sim N$). Therefore, reduction on the speed results in reduction on the absorbed power. The drive can be used to run the cylinders independently, which improves the extraction process and renders the milling process much more flexible.

Banbury®

The speed control flexibility as well as the capability of driving high torque applications, makes the variable frequency drive the ideal device for Banburys applications, ensuring a perfect and homogeneous mix and resulting in quality improvement for the final product.

**Air-cooling**

- Simple maintenance
- Low drive losses
(low heat generation)
- Low noise level

**12-pulse or 18-pulse Input Rectifier**

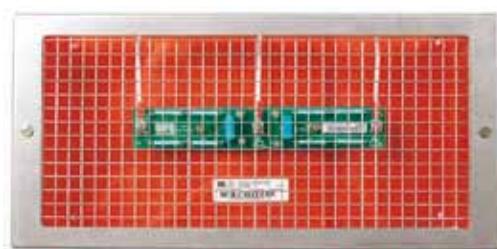

- Low harmonic distortion
- High power factor (> 0.95)

Withdrawable IGBT Arms

- Withdrawable Power Arms
- Gate-drives / feedbacks / monitoring – optic fiber
- Simple control connections
- Stabs for power connections
- Simple and fast maintenance

**DC Link Monitoring**

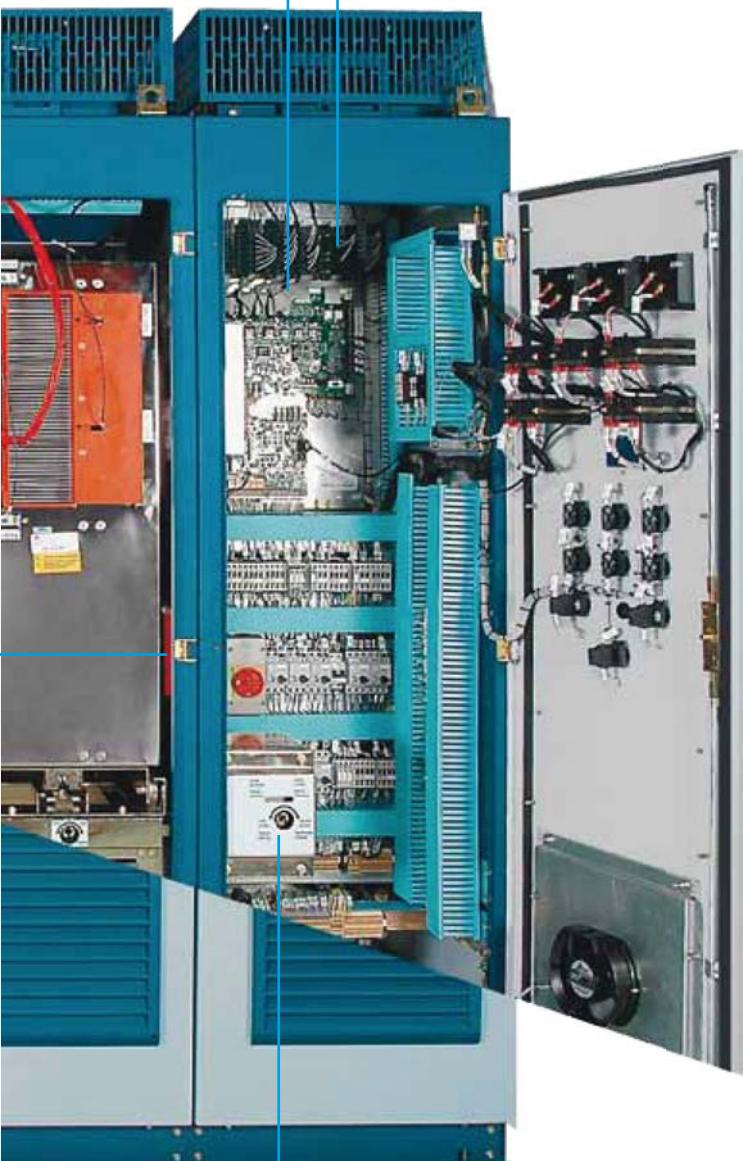

- Visual indication of
the voltage presence
on the DC Link

Monitoring and Protections

- Arc detection for the power section
- Temperature monitoring
- Ventilation monitoring through pressure sensor

Fiber Optic Interface

- Noise immunity
- High Voltage insulation
- Fiber optic for the power and control interconnection: gate drives, feedbacks, temperature monitoring, voltage.

Simple Keypad

- Double display (LED and LCD) for easy visualization and programming
- Uses the same keypad of the low voltage drives (graphical keypad as an option)
- MV Drive programming follows the same philosophy of the LV drives

Safety Operation

- Mechanical interlocking for the power sections
- Electro-mechanical interlocking with the main input circuit breaker, which does not allow the doors opening when the circuit breaker is on.

Software for Drives Programming

SuperDrive is a programming software for the MVW-01 drives. The software incorporates functions such as: parameters upload and download, drive operation and monitoring, off-line programming, and trace function. SuperDrive is a Windows compatible software (Windows 95, Windows 98, Windows ME, Windows NT Workstation 4.0, Windows 2000 Professional, Windows XP). The Drive-PC communication uses a RS-232 or a RS-485 interface.
