

PYROMETER OVERVIEW

Highly Accurate Infrared Thermometers for Non-contact Temperature Measurements

Advanced Energy's pyrometers are temperature measurement instruments that operate on the principle of infrared radiation, i.e. they detect infrared radiation of objects to determine the temperature.

In many industry sectors, the use of non-contact temperature measurement instruments is an important technology. For example, it is used for controlling complete factory processes or measuring even the smallest components to ensure a consistent quality level.

With a huge pyrometer product portfolio developed from years of research and customer contact, Advanced Energy provides solutions for nearly every application request. Special solutions that are not listed in this brochure can also be quickly adapted to customer or application specific requirements.

This overview gives an impression of the broad variety of pyrometers and the possibilities that they provide. The instruments are classified in application areas and thereunder in product series.

METALLIC, CERAMIC, AND GRAPHITE SURFACES

EMISSIVITY OF METALS

The emissivity of bright metal surfaces is high at short wavelengths and decreases with lengthening wavelengths. In the presence of oxidized and soiled metal surfaces, results are not necessarily consistent; emissivity may be strongly influenced by temperature and/or wavelength.

Metal components are often bright after machining, and their surfaces change when heated. At temperatures above 300°C, tarnishing colors and increasing oxidation scale usually appear. This needs to be taken into consideration to avoid measurement errors.

Shiny metal surfaces strongly reflect infrared radiation, i.e. their reflection coefficient is high and their emission coefficient is low.

A hot object has a high reflection coefficient and, if it is close to where a temperature reading needs to be taken, it affects the value of that reading (especially with hotter objects).

PORTABLE PYROMETERS SERIES 8

Portable pyrometers suitable for measuring metals, ceramics, graphite, etc. or special applications such as pouring streams or in coke ovens.

- Precision optics for small spot sizes
- Robust die cast housing for use in harsh environments
- Large data storage
- Short response time for measurements of fast processes
- Temperature display on housing, in view finder, and multifunctional display

SERIES 8

PORTABLE

SERIES 15

Model	IS 8 pro	IS 8-GS pro	IGA 8 pro	IGA 15 plus
Brief Description	Very fast portables for measurements on metals and ceramics. Very small spot sizes, maximum value storage, temperature indicator.	Especially designed for measurements on molten metals in the pouring stream.	Very fast portables for measurements on metals and ceramics. Very small spot sizes, maximum value storage, temperature indicator.	Measurement of metals, ceramics, graphite, etc. Laser targeting light, min/ max./ avg., data storage, close-up lens for spot sizes up to 1.25 mm.
Temperature Ranges	600 to 1800°C 750 to 2500°C	1000 to 2000°C	250 to 1600°C 280 to 2000°C	250 to 1800°C
Spectral Range	0.78 to 1.1 μm	0.55 μm	1.45 to 1.8 μm	1.45 to 1.8 μm
Measurement Uncertainty	0.4% oR + 1°C	0.4% oR + 1°C	0.4% oR + 1°C	0.6% oR
Repeatability	0.1% oR or 0.8°C	0.1% oR or 0.8°C	0.1% oR or 0.8°C	0.2% oR
Optics	Focusable optics: 500 to 9000 mm Optional: close-up-lens 250 to 500 mm	Focusable optics: 500 to 9000 mm Optional: close-up-lens 250 to 500 mm	Focusable optics: 500 to 9000 mm Optional: close-up-lens 250 to 500 mm	Fixed optics: a=800 mm Optional: close-up-lens a=250 mm
Field of View (Min spot size \varnothing in mm)	min 500:1 (1 mm) w. close-up-lens: 0.5 mm	180:1 (2.8 mm) w. close-up-lens: 1.1 mm	min 310:1 (1.6 mm) w. close-up-lens: 0.8 mm	min 200:1 (4 mm) w. close-up-lens: 1.25 mm
Alignment	Through lens sighting	Through lens sighting	Through lens sighting	Laser targeting
Exposure time t_{90}	1 ms	500 ms	1 ms	20 ms
Output	USB	USB	USB	USB

METALS

FEATURED PRODUCT

ISR 6-TI ADVANCED

First industrial grade hybrid pyrometer – combination of pyrometry and thermal imaging in a single solution.

- Built-in video camera with short wavelength infrared filter
- Auto calibration of thermal image relative to accurate pyrometer temperature reading
- Definition and evaluation of ROIs (Regions of Interest) in the thermal image
- Inclusive video cable and Video-to-USB grabber

IGAR 6 ADVANCED

Digital ratio pyrometer with possible combination of 1-color and 2-color measurement.

Wide temperature ranges and various operating modes:

- 1-color mode: 100 to 2000°C
- 2-color mode: 250 to 2000°C
- Smart mode: automatic (temperature-dependent) transition from 1-color to 2-color mode

Very fast response time for highly dynamic processes. Automatic emissivity determination. 4 digit LED display. Fully digital core for sub-ranging and adopted analog output.

OPERATING MODES

IGA 6/23 Advanced

Low temperature version of the IGA 6 Advanced for temperature measurement on metals starting at 50°C.

ISR 6 Advanced

Highly accurate digital, fast pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, focusable optics, and integrated LED display.

ISR 6-TI Advanced

Highly accurate digital pyrometer in 2-color design with built-in video camera system and infrared filter for non-contact measurement and display of thermal images.

IGAR 6 Advanced

Highly accurate digital pyrometer in 2-color design with possible combination of 1-color and 2-color measurement.

METALS

FIBER OPTIC PYROMETERS

Fiber optic pyrometers use an optical fiber to transmit the radiation between an optical head and the measuring transducer.

Examples:

- Various optical heads available
- Can be used for measurements in vacuum chambers using feed through flanges
- The optical head and fiber can be used at high ambient temperatures
- Optical head and fiber can be used in electromagnetic fields

SERIES 12

Model	ISR 12-LO	ISR 12-LO/GS	IGAR 12-LO
Brief Description	Fully digital, very fast pyrometer in 2-color design (switchable to mono mode), with fiber optic cable lengths up to 30 m, display and laser targeting light, very small spot sizes, analog output and digital interface, maximum value storage.	Special version of ISR 12-LO for measurement of pouring streams. SERIES 12-TSP

Transfer Standard Pyrometers for verification of blackbody calibration source temperatures.

The accuracy of a calibration source (blackbody) is likely to drift over the course of time from the defined specification. Special Transfer Standard Pyrometers meet extreme high accuracy specifications and are used to transfer temperature data from a primary infrared source to other calibration sources.

IS 12, IS 12-S

Fully digital, highly accurate, very fast pyrometers. Built-in digital display, view finder and optional targeting light, very small spot sizes, variable or fixed optics, analog output, digital interface, maximum value storage. Option: built-in scanner (-S).

IGA 12, IGA 12-S

Fully digital, highly accurate, very fast pyrometers. Built-in digital display, view finder and optional targeting light, very small spot sizes, variable or fixed optics, analog output, digital interface, maximum value storage. Option: built-in scanner (-S).

IS 12-TSP

Transfer-Standard-Pyrometer specially designed for the exact verification of the temperature of a blackbody calibration source. Resolution 0.01°C, extremely high accuracy and long term stability. Traceable works certificate with 5 measuring points.

IGA 12-TSP

Transfer-Standard-Pyrometer specially designed for the exact verification of the temperature of a blackbody calibration source. Resolution 0.01°C, extremely high accuracy and long term stability. Traceable works certificate with 5 measuring points.

FEATURED PRODUCT

SERIES 140 WITH PROFIBUS, PROFINET, OR ETHERNET INTERFACE

Next to the standard interfaces RS232 and RS485, the IS 140, IGA 140, and IGA 140/23 pyrometers are also available with internal Profibus, Profinet, or Ethernet interface.

Easy integration into existing Profibus or Profinet systems or into the existing local network.

- PB types are equipped with a Profibus-DP interface
- ET types are equipped with an Ethernet interface
- PN types are equipped with a Profinet interface

SERIES 140

IS 140

Fully digital, very fast pyrometer. Very small spot sizes, focusable optics. Display, buttons for instrument settings, analog output, digital interface, maximum value storage.

IS 140/055

Special version of the IS 140 with extremely short wavelength for measurements of metals with high emissivity and little dependency on emissivity variations.

IS 140/067

Special version of the IS 140 with extremely short wavelength for measurements of metals with high emissivity and little dependency on emissivity variations.

IS 140 Forging

Special version of the IS 140 for measurement of Forging processes.

IGA 140

Fully digital, very fast pyrometer. Very small spot sizes, focusable optics. Display, buttons for instrument settings, analog output, digital interface, maximum value storage.

METALS

SOFTWARE

TQCS: TEMPERATURE QUALITY CONTROL SYSTEM

Complete recording and archiving of process temperatures.

- Central, order-related, and manipulation-safe temperature recording for every single work piece—simultaneously on up to 30 machines
- Connects easily to existing machine controllers
- Reliable identification and discharge of scrap
- Modular system for easy upgrade or retrofit

Model	IGA 140/23	IPE 140	IPE 140/39	IS 210	IGA 210, IGA 210-L
Brief Description	Fully digital, very fast pyrometer for measurement of low temperatures on metals. Very small spot sizes, focusable optics. Display, setting keys, max. value storage. Analog output, digital interface.	Fully digital, very fast pyrometer for measurements of low temperatures on metals. View finder or laser targeting light, small spot sizes, focusable optics. Analog output, digital interface.	Special version of the IPE 140 for measurement of objects in flame heated furnaces, sees through clean combustion flames and hot gases.	Fast high temperature 2-wire digital pyrometer with analog output, service interface (for programming emissivity, response time and temperature range), and LED targeting light.	Fast medium temperature digital pyrometers in 2-wire design with analog output, service interface (for programming emissivity, response time and temperature range), and LED targeting light.

SERIES 320

Small and fast digital pyrometers in various versions.

- Small housing dimensions for easy installation, suitable for use in confined spaces
- LED targeting light
- RS485 interface for long transmission networks for connection to a PC via USB converter or machine control (PLC)
- Analog output adjustable to 0 or 4 to 20 mA for connection of standard analyzing instruments
- Internal digital signal processing for high accuracy
- Series includes versions with fiber optics and ratio pyrometer versions

SERIES 310

SERIES 320

IS 310

Good value, small, fast, high temperature 2-wire pyrometer with fixed focus, adjustable emissivity, and LED targeting light.

IGA 310

Good value, small, fast, medium temperature 2-wire pyrometer with fixed focus, adjustable emissivity, and LED targeting light.

IS 320

Small and very fast digital pyrometer with fixed focus and LED targeting light.

IGA 320

Small and very fast digital pyrometer with fixed focus and LED targeting light.

IGA 320/23

Low temperature version of the IGA 320 for temperature measurement on metals starting at 75°C.

FEATURED PRODUCT

HIGH SPEED SERIES 740

The High Speed Series 740 offers ultra fast pyrometers with targeting light, very small spot sizes, and variable or fixed optics with an optional view finder.

- Extremely fast response time of only 6 μ s for measurements of fast moving objects or fast temperature changes.
- Models are also available as measuring stations including bench unit, display, power supply, USB interface, cables, etc.

INFRARED TEMPERATURE SWITCHES

Infrared temperature switches recognize hot objects (without contact) to trigger a switch process.

The switching level can be adjusted and the switch status is indicated by LED. Switches are used for recognizing, counting, or positioning hot objects, e.g. in forges or steel works.

M67S

TEMPERATURE SWITCHES

M67S 0.78 to 1.06 μm

Analog 2-wire pyrometer with view finder and focusable optics, for high temperature applications.

M67S 1 to 1.6 μm

Analog 2-wire pyrometer with view finder and focusable optics, for mid / high temperature applications.

M67S 3.86 μm

Special version of M67S for measurement of objects in flame heated furnaces, sees through clean combustion flames and hot gases.

KTS 218

Infrared temperature switch. Recognizes hot objects located in its measuring beam without contact and triggers a switch process.

KTG 218

Infrared temperature switch. Recognizes hot objects located in its measuring beam without contact and triggers a switch process.

NON-METALLIC SURFACES

THE GROUP OF NON-METALS INCLUDES ORGANIC AND INORGANIC MATERIALS.

EMISSIVITY OF NON-METALLIC SURFACES

The group of non-metals includes organic materials, such as foodstuffs, wood or paper, as well as inorganic materials such as ceramics or fire clay.

The emissivity of non-metals rises with increasing wavelength. Generally speaking, from a certain wavelength, the emissivity is nearly constant. The color of the object as seen in the visible light spectrum, has practically no influence on the emissivity behavior in the mid-and long-wave infrared.

ADVANCED ENERGY SERVICE AND SUPPORT

The mission of the Advanced Energy services organization is to keep you focused on your business by delivering world-class customer support.

This means keeping your assets reliable and functioning, and providing you with the knowledge and expertise required to solve complex problems quickly.

The Advanced Energy service portfolio is organized into four major areas:

- Factory Services
- Support Services
- Field Services
- Training and Consulting

SERIES 5

Model	IN 5	IN 5 plus	IN 5-H plus	IN 5-L plus
Brief Description	2-wire pyrometer with 3 fixed optics and analog output for general applications.	Digital pyrometer for general applications. With analog output, digital interface, max. / min value storage, adjustable measuring range, different optics, laser targeting light.	Like the IN 5 plus but with faster response time.	Like the IN 5 plus but with better optical performance (field of view).
Temperature Ranges	-32 to 50°C 0 to 400°C 0 to 100°C 0 to 500°C 0 to 200°C -32 to 900°C 0 to 300°C 0 to 900°C	-32 to 900°C	-32 to 900°C	0 to 900°C

NON-METALS

SOFTWARE

SOFTWARE INFRAWIN

Easy to use measurement and evaluation software for remote configuration of fixed digital Impac pyrometers.

Freeware. Configure pyrometer settings via computer. Connect up to two pyrometers at the same time. Display temperature data as color bars and online graphics. Capture downstream evaluations as tables, graphics, or text files. Calculate spot sizes for different measuring distances, etc.

SERIES 140, 210, 300

SERIES 500

Model	IPE 140/34	IN 210	IN 300	IN 510, IN 510-N
Brief Description	Special version of the IPE 140 for measurement of thin PE and PP foils with a minimum material thickness of only 30 µm.	Digital pyrometer with analog output (2-wire design) and service interface (for programming emissivity, response time, and temperature range).	Good value, small 2-wire pyrometer with fixed focus, adjustable emissivity, and easy installation.	Digital pyrometers with separate miniature sensor head. Sensor head / cable usable in ambient temperatures without cooling up to 85°C.
Temperature Ranges	50 to 400°C 75 to 500°C	-32 to 900°C	0 to 100°C 0 to 200°C -20 to 300°C	0 to 500°C 0 to 600°C

COMPREHENSIVE PYROMETER ACCESSORIES

Advanced Energy provides an extensive portfolio of mechanical and electrical accessories for all types of pyrometers as well as an offering of various Pyrometer Software.

The mechanical accessories e.g.

include: cooling jackets, mounting devices, flange systems, laser aiming lights, air purge units, sighting tubes, optical components, etc.

The electrical accessories e.g include:

power supplies, controllers, connection cables, indicators/displays, converters, protocol converters, I/O modules, scanning systems, etc.

GLASS SURFACES

PYROMETERS FOR MOLTEN GLASS, FLAT GLASS, CONTAINER GLASS, TECHNICAL GLASS, ETC.

EMISSIVITY OF GLASS SURFACES

Partially transparent materials such as glass and quartz have their own unique emissivity. The emissivity of glass is characterized by wavelength ranges where infrared radiation largely passes through the glass material (transmission), others in which it is absorbed almost completely (absorption), and where it penetrates into the glass surface depending on the glass type.

In small absorption bands these materials are opaque to radiation, which is why these bands are particularly suited for temperature measurements.

Glass is transparent in the visible light and near infrared ranges (to about 3 μm), which means that its transmission is high, and consequently its emissivity low. As you can see in the figure to the right, the emissivity of glass is very high in the range from 4.5 to 8.5 μm , because glass has a wide absorption band in this spectral range. Above 8 μm the reflection of glass increases sharply, making accurate measurements difficult.

As a rule, the wavelength range used for temperature measurements on glass surfaces lies around 5.14 μm (for glass thicknesses of 1 mm and more at medium to high temperatures), or 7.75 μm (for glass thicknesses below 1 mm and low to medium temperatures).

TYPICAL WAVELENGTHS USED IN THE GLASS INDUSTRY

Depending on the application, Glass manufacturers may use different wavelengths to measure the glass surface or even inside the glass.

0.78 to 1.15 μm e.g. for molten glass or refractory in melting furnace, forehearth, feeder, glass gobs, etc. (penetration depth into glass: up to approx. 40 mm)

3.9 μm for measurement through flames, e.g. in heating zone of tin bath (slight penetration into glass)

5.14 μm for glass surfaces

7.8 μm for ultra-thin glass sheets (< 1 mm)

SERIES 5

Model	IN 5/5	IN 5/5 plus	IN 5/5-H plus	IN 5/5-L plus

GLASS

FEATURED PRODUCT

IN 6/78

Pyrometer for stress-free production of thin and thinnest glass sheets.

- Measurement of ultra-thin glass sheets with less than 1 mm thickness
- Easy installation and maintenance due to compact, rugged IP65 stainless steel housing for harsh environments
- Multiple onboard digital and analog interfaces for direct and fast PLC communication
- Specially designed and coated high-end optics for high accuracy and excellent size of source effects

DID YOU KNOW?

Careful monitoring of glass temperatures and of production equipment and machinery is the only way to ensure that product quality will meet the stringent marketplace requirements.

Advanced Energy offers more than 55 years of experience in non-contact measuring technology

The primary advantages of non-contact temperature measurements are:

- Easy handling
- Fast response
- High flexibility
- Prolonged service lives
- No contamination of the molten glass
- Increased throughput rates

SERIES 210 M67S

IN 140/5-L

Like IN 140/5 but with better optical performance (field of view)

IN 210/5

Glass surface measurement version of IN 210, 2-wire design and service interface. Programmable measuring range.

M67S 0.78 to 1.06 μm

Analog 2-wire pyrometer with view finder for high temperature applications.

M67S 4.8 to 5.2 μm

SPECIAL MATERIALS

PYROMETERS FOR SPECIAL APPLICATIONS AND MATERIALS

EMISSIVITY OF SPECIAL MATERIALS

Advanced Energy produces a wide range of specialized pyrometers beyond those described in the previous sections. These pyrometers are customized to address specific applications and materials, and are often available with the needed accessories to provide a complete solution package.

To measure temperatures for these specialized applications, one must carefully understand the emissivity, reflectance, and transmissions of the objects to be measured. We then select the proper detectors and filters to maximize the detected signal. For example, when measuring the temperature of a combustion flame where there is expected to be significant CO₂ content, we select a narrow band filter at 4.5 μm where the emission from this gas is high (see figure).

If we instead choose a 3.9 μm filter, then we can effectively avoid the CO₂ and H₂O emission bands, and look through the flame.

If you have a specialized need, which is not covered with the pyrometers below, please consult our Applications Engineering Team.

SOME EXAMPLE APPLICATIONS INCLUDE

- Measuring flame or gas temperature, by monitoring the CO₂ absorption line
- Measuring temperature on thin plastic films
- Measuring Silicon and Sapphire wafers in Semiconductor & Compound Semi processes

APPLICATION CONSULTING AND SUPPORT

Supporting Your Applications Needs

The Advanced Energy Global Applications Engineering team is staffed with Sr. Engineers to help develop new solutions for customers worldwide, with focus on core markets and challenging applications.

Advanced Energy is known for its ability to build products for custom applications using our temperature and gas sensing products to meet the stringent design requirements of the energy, industrial and clean technology markets.

Contact our dedicated Customer Care Team to request an application consultation.

SERIES 5,6

SERIES 12

Model	IN 5/9 plus	ISR 6 Advanced	IS 12-AI, 12-AI/S	IS 12-Si
Brief Description	Digital pyrometer especially designed for measurement of sapphire. With analog output, digital interface, max/min value storage, different optics, laser targeting light.	Highly accurate digital, fast pyrometer in 2-color design (switchable to mono mode) with analog output and digital interface, focusable optics, and integrated LED display.	Special version of the IS 12, designed for the measurement of Aluminum. IS 12-AI/S with built-in scanner, scanning angle adjustable between 0 to 4°, scanning frequency between 0 to 10 Hz.	Dedicated version of the IS 12, designed for measuring silicon wafers.

Infrared Temperature Measurement

The non-contact temperature measurement (pyrometry) is an optical measurement based on the property of all materials to send out electromagnetic radiation (infrared radiation). The infrared thermometer (pyrometer) uses this radiation to deter-

mine the temperature. The pyrometer aims with the optics at a certain spot of the object and determines the temperature of this spot. Today, typically spectral responses of pyrometers are in the near, middle, and long infrared.

Selection of the Appropriate Advanced Energy Pyrometer

TEMPERATURE RANGE

Our pyrometers measure temperatures from -40 to 3500°C. The instruments are available in different temperature ranges. The ranges shown in the chart do not show one single temperature range but give an overview of all available measurable temperatures.

SPECTRAL RANGE

The material of the measured object demands the correct selection of the optimum spectral range of the pyrometer for a specific application. Therefore, the correct spectral range is one of the most important parameters. For typical wavelengths please see page 8.

RESPONSE TIME

The response time is the time interval between the instant of an abrupt change in the value of the measuring temperature and the instant from which the measured value of the pyrometer remains within specified limits.

SIGHTING

For easy alignment of the pyrometers to the measuring object, different sighting systems are available:

- Aiming (LED or laser) ■ TV camera
- View finder

DESIGN

Our pyrometers are designed for the use in industry under rough conditions. The housings of the fixed pyrometers are made of stainless steel or die cast aluminum with the protection class of IP65. The housings of the portables are made of robust plastics or die cast aluminum.

Available designs include:

- Compact pyrometers with integrated lens
- Fiber optic pyrometers (-LO)
- Portables

OUTPUT

Different pyrometers provide different outputs. Analog outputs and digital interfaces are available. Some pyrometers have various switchable outputs.

- Analog output 0–20 mA or 4–20 mA or 10 mV/°C or 0–5 V or thermo couple type J or K
- Fieldbus-connection, integrated ProfiBus, ProfiNet, Ethernet
- Digital interface RS232 or RS485
- Switch output for IR switch: 20 V, max. 30 mA

FIELD OF VIEW

The dimensions of the measured object determine the required spot size of the pyrometer. The measured object must at least fill the spot size to achieve a correct temperature measurement. Spot sizes are dependent on the type of pyrometer and measuring distance and can be calculated using the distance ratio or field of view (FOV).

(e.g. 240:1 means: in a distance of 1200 mm the spot size is 5 mm)

ABOUT ADVANCED ENERGY

Advanced Energy (AE) has devoted more than three decades to perfecting power for its global customers. AE designs and manufactures highly engineered, precision power conversion, measurement and control solutions for mission-critical applications and processes.

AE's power solutions enable customer innovation in complex semiconductor and industrial thin film plasma manufacturing processes, demanding high and low voltage applications, and temperature-critical thermal processes.

With deep applications know-how and responsive service and support across the globe, AE builds collaborative partnerships to meet rapid technological developments, propel growth for its customers and power the future of technology.
