HARTING

Ethernet is coming up to standard industrial interface. Therefore, automation devices, such as controllers, sensors and actuators feature possess on one or several RJ45 interfaces.

HARTING offers the matching sockets and the ideal connectors for quick and safe connection of the 2- or 4-pair Ethernet cable to the appliance. Users can rely either on ready-to-use patch cables in various lengths, or obtain RJ45 connectors for easy on-site dressing of the cables without using special tools.

HARTING relies on the *HARAX*® quick connection technology for on-site preparation of cables, meeting all industrial requirements made on safe and durable contacting.

The HARTING RJ Industrial® connector family also supports Ethernet automation profiles such as PROFINET, Ethernet/IP, POWERLINK and EtherCAT for the integration of RJ45 connection technology at field levels.

Application profile:

[1] Piercing contacts

The modular HARTING RJ Industrial® connector family is based on the standard RJ45 pin profile and was developed especially for use in rugged industrial environments.

This technology charts a new course in the wiring of appliances with Ethernet interfaces, enabling the on-site configuration of connectors for many industrial applications, no matter if the product is a power connector or a communications connector.

In the context of the wiring of 4-pole Fast Ethernet networks, HARTING relies consistently on the *HARAX®* quick connection technology which has proved its worth in many industrial applications.

Solid or flexible conductors up to a cross-section of AWG 22 are terminated by IDC technology, without stripping or using any special tool.

HARTING offers the 8-pole data module with piercing connection technology, which meets the high requirements of category 6 for all Gigabit Ethernet networks. The 8-pole adapter of the category 6 data module also matches the screening plates of the 4-wire data module with quick connection technology. This functionality enables the conversion of any 100 MBit Fast Ethernet network into a Gigabit Ethernet network using HARTING RJ Industrial® connectors. This innovative platform strategy also permits the use of the RJ45 data module in combination with the PushPull and Han® 3A connector families.

Based on this innovative data module, HARTING has developed a comprehensive connector family which covers all applications for Fast Ethernet, Gigabit Ethernet, PROFINET, Ethernet/IP and other Ethernet profiles in the industrial environment.

Degree of protection IP 20 is available for the standard RJ45 connectors, either for configuration in the field, or as molded system patch cable.

APPLIANCE INTEGRATION:

HARTING offers various RJ45 jacks for direct mounting on the PCBs of appliances.

RJ45 QUICK CONNECTION WITH HARAX®:

The HARTING *HARAX®* quick connection technology is the ideal solution for dressing RJ45 connectors on-site. In order to produce a gas-proof and vibration resistant Ethernet connection, users only have to strip the cable insulation, insert the conductors, terminate the shielding plates and close the connector.

HARAX® is the most convenient handling standard connection for Fast Ethernet where the emphasis is set on the assembly of connectors in the field.

HARAX® is an ideal quick connection technology which is deployed universally in a very wide range of data, signal and power series.
ASSEMBLED SYSTEM CABLES:

HARTING offers a comprehensive range of ready-to-use RJ45 system cables for the simple and easy connection of Ethernet devices. HARTING also provides assembled and tested system cables for special Ethernet profiles such as PROFINET and Ethernet/IP.

The range of solution comprises star quad, double-pair and four-pair cables of diverse structure, as required in drag chain applications, for example.

Consequently, HARTING system cables can be deployed in all Ethernet applications and all ambient conditions.

PERFORMANCE FOR THE FUTURE:

The HARTING RJ Industrial® portfolio offers a wide range of solutions for Industrial Ethernet, independent of wiring strategies to ISO/IEC 11801 currently deployed to wire appliances.

HARTING RJ Industrial® provides field connection technology based on 2-pair category 5 variant and on 4-pair category 6 variant.

HARTING RJ Industrial® is ideal for the future-proof planning of appliance interfaces, regardless of whether your future applications will involve Fast or Gigabit Ethernet, or 10 Gigabit Ethernet.

HARTING RJ Industrial®

HARTING RJ Industrial® RJ45 jacks for direct device integration

Advantages

- Compact design
- Category of transmission Cat. 5

Technical characteristics

Locking	RJ45 snap acc. to IEC 60 603-7

Minimising cross-connection through wire management

In Gigabit Ethernet there is no difference between uplink and downlink ports. Any network device automatically recognises whether the connected device is a network card or a switch.

There is no need for cross-connected and through-connected cables found under 100 Mbit Fast Ethernet, where this functionality is not available.

The symmetrical structure of a 1:1 through-wired patch cable results in crossing of the wire pairs 2 and 4. This has a negative effect on the near-end crosstalk of the transmission route. For performance reasons, a symmetrical crossing of the pairs must be realized as near as possible to the connector. This is achieved by the colour-coded wire managers, which leads the conductor pairs in a defined way to the connection points on the RJ45 jack (see figure "Wire manager"). Crossing the cross-connection in the cable manager instead of in the cable itself, so contributing to the high performance of the transmission route.

Pair Code	Pin No.	Colour
T1	5	White/Blue
R1	4	Blue/White
T2	3	White/Orange
R2	6	Orange/White
T3	1	White/Green
R3	2	Green/White
T4	7	White/Brown
R4	8	Brown/White

Pin	Function
1	Transmission +
2	Transmission –
3	Receive +
6	Receive –

Connection of core pairs

Wiring the data module

For historical reasons, TIA/EIA 568:2002 has two ways to connect the conductors at the connector. These describe which individual colour-coded conductors are to be brought to which contact in the connector.

- EIA/TIA 568:2002 A: This is the recommended connection variant in the EIA/TIA standard.

- EIA/TIA 568:2002 B: This connection variant matches the older AT&T 258 A colour code, which is still the most widely used wiring scheme.
Connection in acc. with TIA/EIA 568A
Connection in acc. with TIA/EIA 568B

The RJ45 jack must be connected according to the appropriate scheme, depending on the application. For Gigabit Ethernet the connection is only to be made at the RJ45 jack, not at the plug, since the conductor pairs in the patch leads are symmetrically routed due to the 1:1 auto-crossing.

The usage of different wire managers in a patch cord guarantees a symmetrical crossing of the wire pairs inside the connector. Thereby the Category 6 data transmission performance is assured.

Application of two different wire managers in one cable

wire manager, blue   wire manager, white

Application of the same wire managers in one cable

wire manager, white   wire manager, white
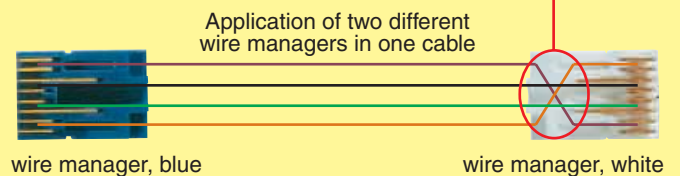

Crossover of the wire pairs leads to a degradation of the data transmission characteristics. The Category 6 performance can possibly not be achieved.

Wire manager

HARTING RJ Industrial® Gigalink, 8-poles

HARTING RJ Industrial® connector set RJ45, 8-poles

Advantages

- RJ45 Ethernet-Data connector suitable for indsutry
- Field-assembly with piercing contacts
- Compact design
- Ergonomically unlocking clip
- Less weight assures shock- and vibration resisting connection
- Category of transmission Cat. 5

Reference note:
For cat. 6 patch cords it is recommended to use 1 connector with a white cable manager and one with a blue cable manager, in order to optimise the crosstalk between different signal pairs.

Technical characteristics

Connector type	RJ45 connector acc. to IEC 60 603-7
